Managing your specialty medication needs

Navigating certain chronic, complex, and rare health conditions can involve new routines and specialized treatments.

Specialty medications, prescribed for conditions such as cancer, autoimmune diseases, or infectious diseases, may require additional steps, including:

- Coordination with your medical team for treatment planning and follow-up
- Involvement of patient support programs, where applicable
- Special ordering, storage, or delivery requirements
- Ongoing monitoring as part of your care

How Walmart Pharmacy supports you

Walmart pharmacists are trained to support patients using specialty medications and have received additional training focused on complex therapies and conditions.

This helps pharmacists to:

- Support your prescribed treatment plan
- Watch for potential side effects or medication interactions
- Work with your healthcare provider as part of your care team

Support beyond the prescription

Specialty medications at Walmart Pharmacy may include additional support, such as:

- Help with prior authorization and coverage, through coordination with Patient Support Programs (PSPs), when available
- Support with medication administration, including injection training and administration (where within scope of practice)
- Guidance on managing side effects and understanding how your medications work together

Access and convenience

- Pick up your medication in-store or get it delivered to your home or clinic where possible
- Seamless prescription transfers from another pharmacy to Walmart Pharmacy
- Manage your prescriptions and set reminders using the Walmart Pharmacy App
